

Global Credit Services Launches ClearPath Payment Portfolio Report Improves Commercial Payment Risk Management

NEW YORK, December 3, 2014 – Global Credit Services, a leading provider of information and enterprise credit risk management software solutions and analysis, announced today its launch of its new ClearPath Payment Portfolio Report. The report dramatically improves comparative insights into business-to-business payment activity and behavior – providing the information needed to quickly assess and manage the risk of doing business with over 20 million private and public U.S. and Canadian companies.

The new ClearPath Payment Portfolio Report draws from extensive business payment experience data. It's a comprehensive snapshot that includes, for each company, a risk score based on payment experience, accounts receivable aging data and credit indicators, a company profile, industry classification codes, corporate hierarchy data, and competitor information. The new report is a valuable portfolio management tool – facilitating quick, efficient review of the risk profile of business relationships and identification of companies requiring more in-depth analysis, especially privately-held businesses.

“We are excited to announce the launch of our new trade data-driven Payment Portfolio Report,” said Douglas Newman, President and Chief Executive Officer of Global Credit Services. “It clearly builds on our 18 years of experience providing clients with a proven and comprehensive solution that helps them measure, manage, and mitigate financial risk among their prospects, customers, counterparties, and suppliers.”

The new ClearPath Payment Portfolio Report joins Global Credit Services' Payment Score Report, which provides more in-depth payment-based information for companies of interest.

About Global Credit Services

Global Credit Services, based in New York, is a leading provider of business-to-business credit information and financial risk management solutions. It helps corporations measure, control, and mitigate financial risk with its in-depth analysis, web-based software solutions, and robust database covering U.S. and international companies.
